

Lab#9

Context free Grammar & Push Down Automata

Remember:

Definition of context free grammar (CFG):

A context-free grammar is a 4-tuple (V, Σ, R, S) , where

1. V is a finite set called the variables,
2. Σ is a finite set, disjoint from V , called the terminals,
3. R is a finite set of rules, with each rule being a variable and a string of variables and terminals, and
4. $S \in V$ is the start variable.

Definition of push down automata (PDA):

A pushdown automaton is a 6-tuple $(Q, \Sigma, \Gamma, \delta, q_0, F)$, where Q , Σ , Γ , and F are all finite sets, and

1. Q is the set of states,
2. Σ is the input alphabet,
3. Γ is the stack alphabet,
4. $\delta : Q \times \Sigma \times \Gamma \rightarrow P(Q \times \Gamma)$ is the transition function,
5. $q_0 \in Q$ is the start state, and
6. $F \subseteq Q$ is the set of accept states.

Theorem 2:

A language is context free if and only if some pushdown automaton recognizes it

Lemma 2.1:

If a language is context free, then some pushdown automaton recognizes it.

Lemma 2.2:

If a pushdown automaton recognizes some language, then it is context free.

Steps converting from CFG To PDA:

The following is an informal description of P .

1. Place the marker symbol $\$$ and the start variable on the stack.
2. Repeat the following steps forever.
 - a. If the top of stack is a variable symbol A , nondeterministically select one of the rules for A and substitute A by the string on the right-hand side of the rule.
 - b. If the top of stack is a terminal symbol a , read the next symbol from the input and compare it to a . If they match, repeat. If they do not match, reject on this branch of the nondeterminism.
 - c. If the top of stack is the symbol $\$$, enter the accept state. Doing so accepts the input if it has all been read.

Steps Converting from PDA to CFG:

For every $p, q, r, s \in Q, f \in \Gamma$ and $a, b \in \Sigma_\epsilon$
 If $\delta(p, a, \epsilon) = (r, f)$ and $\delta(s, b, f) = (q, \epsilon)$
 add the rule $A_{pq} \rightarrow aA_{rs}b$

For every $p, q, r \in Q$,
 If $\delta(p, a, \epsilon) = (r, f)$ and $\delta(r, b, \epsilon) = (q, \epsilon)$
 add the rule $A_{pq} \rightarrow A_{pr}A_{rq}$

For every $p \in Q$,
 add the rule $A_{pp} \rightarrow \epsilon$

IMPORTANT:

First, we simplify our task by modifying P slightly to give it the following three features.

1. It has a single accept state, q_{accept} .
2. It empties its stack before accepting.
3. Each transition either pushes a symbol onto the stack (a *push* move) or pops one off the stack (a *pop* move), but it does not do both at the same time.

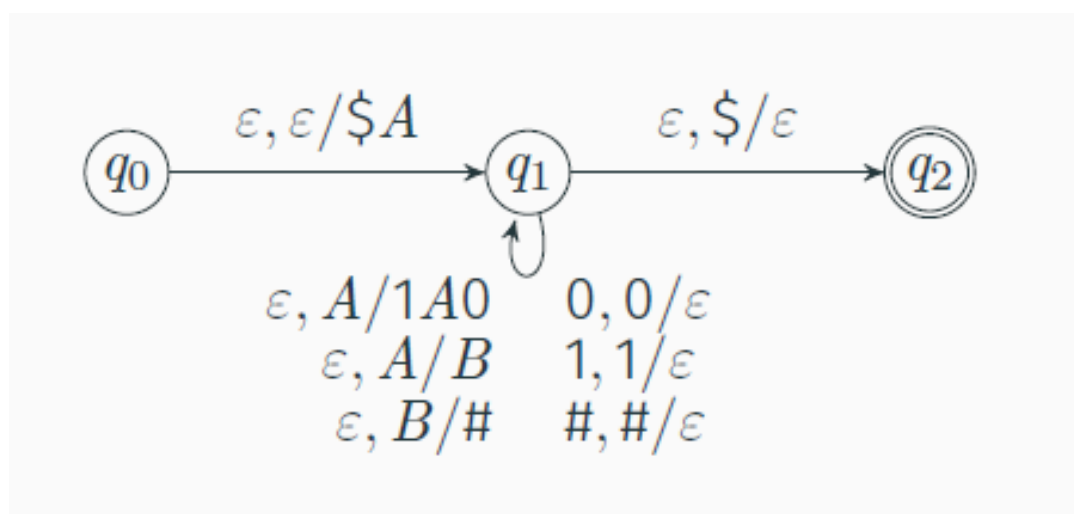

Practice:

1. Convert the following CFG to PDA:

$A \rightarrow 0A1 \mid B$

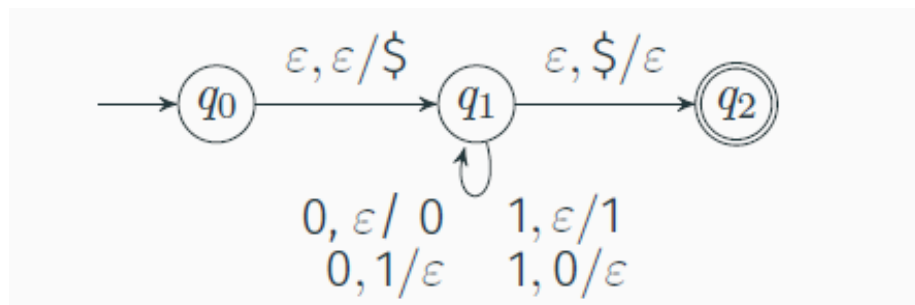

$B \rightarrow \#$

Solution:

2. Convert the following PDA to CFG:

$(\emptyset, E, E) = (1, \$) \rightarrow 1$
 $(1, \emptyset, E) = (1, \emptyset) \rightarrow 2$
 $(1, \emptyset, 1) = (1, E) \rightarrow 3$
 $(1, 1, E) = (1, 1) \rightarrow 4$
 $(1, 1, \emptyset) = (1, E) \rightarrow 5$
 $(1, E, \$) = (2, E) \rightarrow 6$

Equation	Result	Reason
Eq 1,6	$A02 \rightarrow E A11 E$	Same Pop and push
Eq 1,2 & 1,3 & 1,4 & 1,5 & 1,6	E	
Eq 2,3	$A11 \rightarrow A11 A11$	Common r
Eq 2,4	$A11 \rightarrow A11 A11$	Common r
E 2,5	$A11 \rightarrow 0 A11 1$	Common push and pop
Eq 2,6	$A12 \rightarrow A11 A12$	Common r
Eq 3,4	$A11 \rightarrow 1 A11 0$	Common push and pop
Eq 3,5	$A11 \rightarrow A11 A11$	Common r
Eq 3,6	$A12 \rightarrow A11 A12$	Common r
Eq 4,5	$A11 \rightarrow A11 A11$	Common r

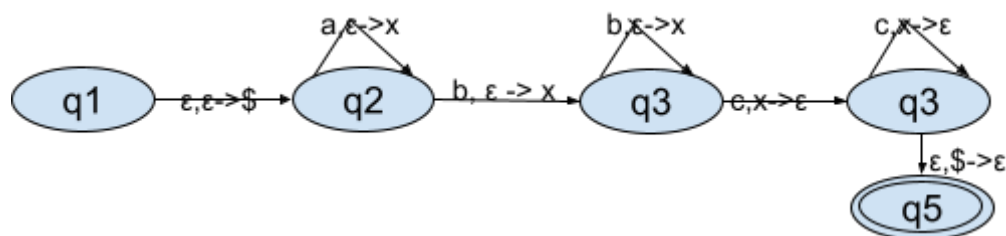

Eq 4,6	$A_{12} \rightarrow A_{11} A_{12}$	Common r
Eq 5,6	$A_{12} \rightarrow A_{11} A_{12}$	Common r

Simplify

From	To	Reason
$A_{02} \rightarrow E A_{11} E$	E	A11 goes to E/ No rule called A02
$A_{11} \rightarrow A_{11} A_{11}$	E	A11 goes to E
$A_{11} \rightarrow A_{11} A_{11}$	E	
$A_{11} \rightarrow 0 A_{11} 1$	$A_{11} \rightarrow 0 A_{11} 1$	
$A_{12} \rightarrow A_{11} A_{12}$	E	A11 goes to E
$A_{11} \rightarrow 1 A_{11} 0$	$A_{11} \rightarrow 1 A_{11} 0$	
$A_{11} \rightarrow A_{11} A_{11}$	E	
$A_{12} \rightarrow A_{11} A_{12}$	E	
$A_{11} \rightarrow A_{11} A_{11}$	E	
$A_{12} \rightarrow A_{11} A_{12}$	E	
$A_{12} \rightarrow A_{11} A_{12}$	E	
Therefore:		
$S \rightarrow 0 S 1 \mid 1 S 0 \mid E$		

3.

$(1, E, E) = (2, \$) \rightarrow 1$
 $(2, a, E) = (2, x) \rightarrow 2$
 $(2, b, E) = (3, x) \rightarrow 3$
 $(3, b, E) = (3, x) \rightarrow 4$
 $(3, c, x) = (4, E) \rightarrow 5$
 $(4, c, x) = (4, E) \rightarrow 6$
 $(4, E, \$) = (5, E) \rightarrow 7$

Equation	Result	Reason
Eq 1, 2	$A_{12} \rightarrow A_{12} A_{22}$	Common r
Eq 1, 3	$A_{13} \rightarrow A_{12} A_{23}$	Common r
Eq 1, 4	E	
Eq 1, 5	E	
Eq 1, 6	E	
Eq 1, 7	$A_{15} \rightarrow E A_{24} E$	Common push and pop
Eq 2,3	$A_{23} \rightarrow A_{22} A_{23}$	Common r
Eq 2,4	E	
Eq 2,5	$A_{24} \rightarrow a A_{23} c$	Common push and pop
Eq 2,6	$A_{24} \rightarrow a A_{24} c$	Common push and pop
Eq 2,7	E	
Eq 3,4	$A_{23} \rightarrow A_{23} A_{33}$	Common r
Eq 3,5	$A_{24} \rightarrow b A_{33} c$	Common push and pop
Eq 3,6	$A_{24} \rightarrow b A_{34} c$	Common push and pop

Eq 3,7	E	
Eq 4,5	$A_{34} \rightarrow b A_{33} c$	Common push and pop
Eq 4,6	$A_{34} \rightarrow b A_{34} c$	
Eq 4,7	E	
Eq 5,6	$A_{34} \rightarrow A_{34} A_{44}$	Common r
Eq 5,7	$A_{35} \rightarrow A_{34} A_{45}$	Common r
Eq 6,7	$A_{45} \rightarrow A_{44} A_{45}$	Common r

Simplify

From	To	Reason
$A_{12} \rightarrow A_{12} A_{22}$	E	$A_{22} \rightarrow E$
$A_{13} \rightarrow A_{12} A_{23}$	E	No rule calls A_{13}
$A_{15} \rightarrow E A_{24} E$	E	No rule calls A_{15}
$A_{23} \rightarrow A_{22} A_{23}$	E	$A_{22} \rightarrow E$
$A_{24} \rightarrow a A_{23} c$	$A_{24} \rightarrow ac$	No rule A_{23}
$A_{24} \rightarrow a A_{24} c$	$A_{24} \rightarrow a A_{24} c$	
$A_{23} \rightarrow A_{23} A_{33}$	E	$A_{33} \rightarrow E$
$A_{24} \rightarrow b A_{33} c$	$A_{24} \rightarrow bc$	$A_{33} \rightarrow E$
$A_{24} \rightarrow b A_{34} c$	$A_{24} \rightarrow b A_{34} c$	
$A_{34} \rightarrow b A_{33} c$	$A_{34} \rightarrow bc$	$A_{33} \rightarrow E$
$A_{34} \rightarrow b A_{34} c$	$A_{34} \rightarrow b A_{34} c$	
$A_{34} \rightarrow A_{34} A_{44}$	E	
$A_{35} \rightarrow A_{34} A_{45}$	E	No Rule call A_{35}

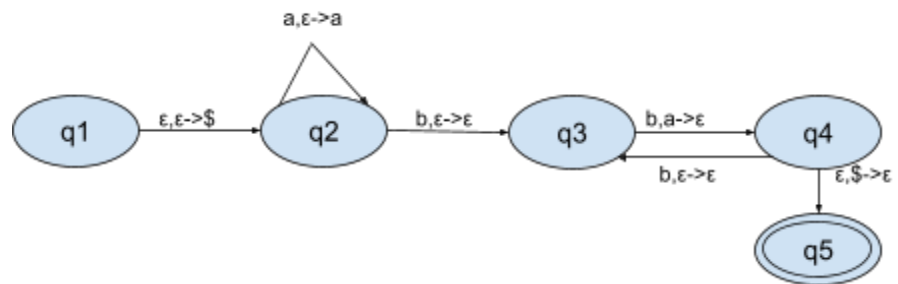

$A45 \rightarrow A44 A45$	E	$A44 \rightarrow E$
<p>Therefore:</p> $S \rightarrow a S c \mid ac \mid b X c \mid bc$ $X \rightarrow b X c \mid bc$ <p>Simplified :</p> $S \rightarrow a S c \mid ac \mid X$ $X \rightarrow b X c \mid bc$		

- Note the simplification is done on multiple steps
- Revisit the lab 8, you can find the vice verse of these examples

4.

Solved by Student as practice $\{a^n b^{2n} \mid n \geq 1\}$
