

Chapter 7: Lab Task

1. Create a directory called `/home/techdocs`.
2. Change the group ownership of the `/home/techdocs` directory to the **techdocs** group.
3. Verify that users in the **techdocs** group can create and edit files in the `/home/techdocs` directory.
4. Set permissions on the `/home/techdocs` directory. On the `/home/techdocs` directory, configure setgid (2), read/write/execute permissions (7) for the owner/user and group, and no permissions (0) for other users.
5. Verify that the permissions are set properly.
6. 7. Confirm that users in the **techdocs** group can now create and edit files in the `/home/techdocs` directory. Users not in the **techdocs** group cannot edit or create files in the
7. `/home/techdocs` directory. Users **tech1** and **tech2** are in the **techdocs** group. User **database1** is not in that group.
8. Modify the global login scripts. Normal users should have a umask setting that prevents others from viewing or modifying new files and directories.
